Fotona
choose perfection

Technology optimized for
Gynecology applications

Integrated G-Runner
Robotic scanner

Dual wavelength
Er:YAG & Nd:YAG lasers

Easy-to-use, guided
User interface

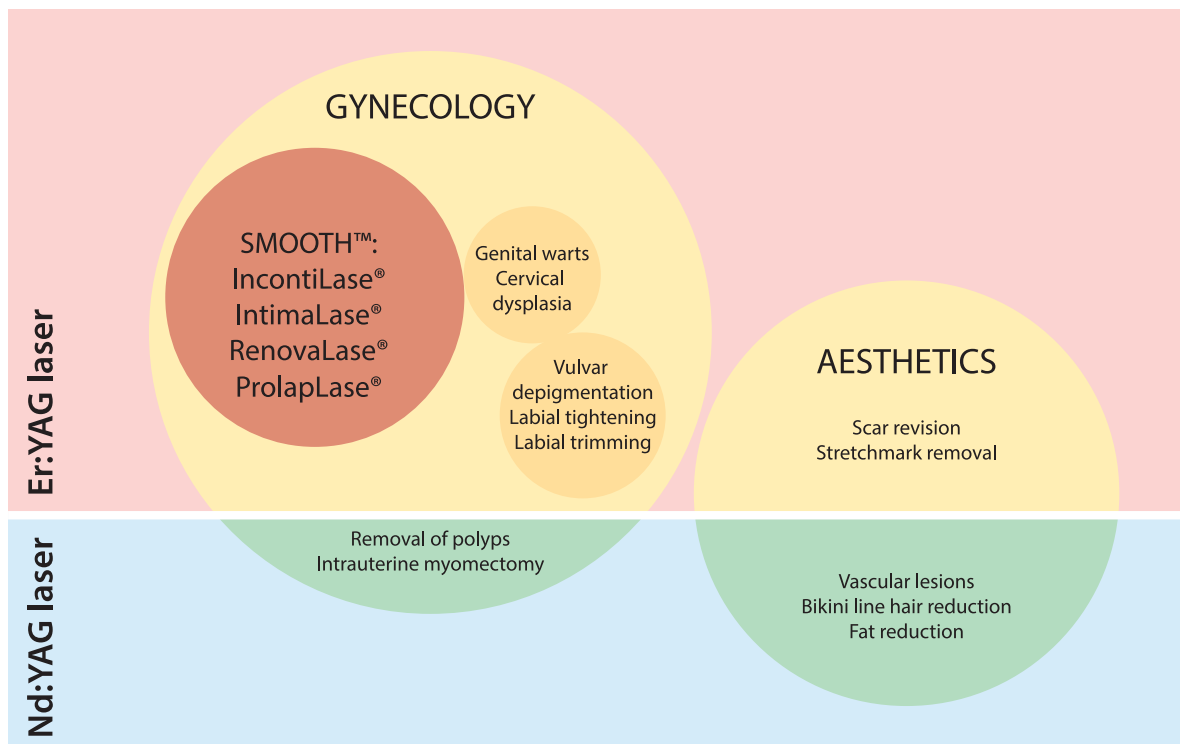

Green pointer

Wireless foot switch

A true gynecological laser

- **Revolutionary, patented & clinically evaluated** non-invasive procedures for treating pelvic floor disorders
- High-precision **clinical, aesthetic and surgical procedures**
- **Two complementary laser** wavelengths (Er:YAG and Nd:YAG) for exceptional versatility – from gentle ablative to non-ablative thermal treatments
- Minimally invasive with **quick recovery** and **high patient satisfaction**

G-Runner Robotic Scanner

Integrated scanner

- Automatic delivery of laser energy
- Optimal accuracy and precision of laser beam delivery
- Optimized treatment time
- Increased comfort and convenience for the operator

SPECIALIZED Innovative handpieces

- Highest quality bio-compatible materials such as titanium and gold
- Fotona's innovative handpiece technology optimizes the delivery of laser pulses to the treatment area.

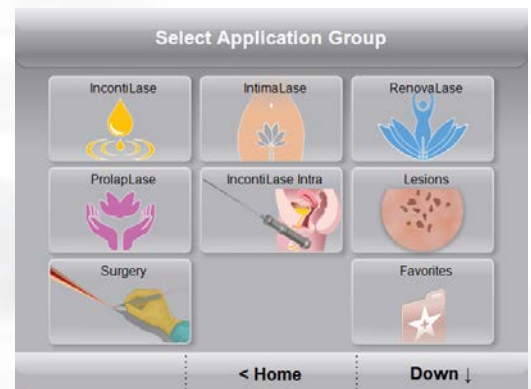

The laser specialized for gynecological treatments

Innovative non-invasive treatments with proprietary Fotona SMOOTH® technology

- **IncontiLase®** - Laser for treatment of Stress Urinary Incontinence
- **IntimaLase®** - Laser for treatment of Vaginal Relaxation Syndrome
- **RenovaLase®** - Laser for treatment of Vaginal Atrophy/GSM
- **ProlapLase®** - Laser for treatment of Pelvic Organ Prolapses

Ablative Er:YAG procedures

- Condyloma
- Episiotomy scars
- C-section scars
- Labiaplasty
- Depigmentation
- Traumatic Scars

Non-ablative Nd:YAG procedures

- Vascular lesions
- Hair removal
- Surgical treatments: polyp removal, intrauterine myomectomy
- Photobiomodulation for pain reduction
- Mucosa and skin wound healing

Unmatched Fotona Technology

Unique Fotona SMOOTH® mode

IntimaLaser™ delivers patented sequential Er:YAG Fotona SMOOTH® mode laser pulses to the vaginal wall mucosa, generating controlled and optimal distribution of heat within the tissue, enabling collagen remodelling and neo-collagenesis.

The 2.94 μm wavelength, in conjunction with Fotona's patented SMOOTH® mode delivery, allows for a highly controlled, safe procedure with no impact to any critical structures, including any penetration or disruption of the mucosal lining.

Third Generation ASP Technology

- Proprietary ASP technology provides unique laser modalities

ASP
POWERED

New Revolutionary
Adaptive Structured Pulse
Technology

Top-Hat Beam Profile

- Uniform** treatments
- Predictable** results

Multi-Channel Feedback Control

- The system double checks the energy and regulation of each pulse for **safe** and **reproducible** treatments

Fotona SMOOTH® Procedures

- Non-invasive, non-ablative laser procedures
- Patented laser technology to send mild heat pulses to the vaginal walls
- Resulting in functional strengthening of connective tissue inside the vaginal wall
- Increases in vaginal wall thickness and functional improvement in the mucosal tissue

SIMPLE AND QUICK

- Ambulatory procedures
- 20-30 minutes/treatment

PATIENT FRIENDLY

- No anesthesia needed
- Minimal-to-no downtime
- High patient satisfaction

Mechanism of action

Stress urinary incontinence treatment

- Non-ablative Fotona SMOOTH® mode technology improves urethral support by photothermal strengthening of the vaginal wall
- Works on connective tissue in the vaginal mucosa with emphasis on the anterior vaginal wall
- For mild and moderate stress urinary incontinence patients, with very good results in severe stress urinary incontinence as well

Fotona SMOOTH® mode treatment of the anterior vaginal wall

One year following the IncontiLase® treatment, we found significant improvement in 77% of patients diagnosed with SUI.

Dr Sabina Sencar

Apart from non-invasiveness, the main advantage of IncontiLase® over surgery is that it can be applied as an ambulatory procedure, which means a lower economic burden.

Dr Urska Bizjak Ogrinc

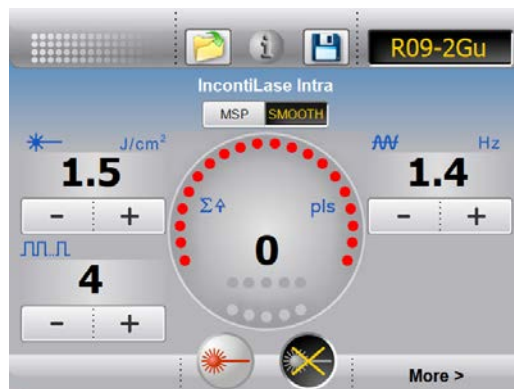

Ogrinc UB, Sencar S, Lenasi H. Novel minimally invasive laser treatment of urinary incontinence in women. Lasers Surg Med. 47(9): 689-97.

IncontiLase® Intra

Treatment for SUI due to intrinsic sphincter deficiency and urinary symptoms of GSM

- Revolutionary non-invasive Fotona SMOOTH® intraurethral treatment
- For treatment of **type III stress urinary incontinence**

R09-2Gu

Significant improvement was observed in 82% of type III SUI patients

Gaspar, A. & Brandi, H., 2017. Non-ablative erbium YAG laser for the treatment of type III stress urinary incontinence (intrinsic sphincter deficiency). *Lasers in Medical Science*, 32(3), pp.685–691.

ICIQ-UI SF evaluation of SUI after Incontilase Intra before treatment (baseline), at 3 and at 6 months following treatment.

Vaginal tightening treatment

- Photothermally tightens the vaginal canal
- Mechanism of action is based on shrinking and thickening of the connective tissue in the vaginal wall
- For women with increased vaginal laxity due to childbirth and/or ageing

IntimaLase® treatment

95% of my patients assess vaginal tightness and sexual gratification as strongly or moderately improved after IntimaLase® treatment.

Dr Jorge Gaviria

Gaviria J, Lanz J. Laser Vaginal Tightening (LVT) – evaluation of a novel noninvasive laser treatment for vaginal relaxation syndrome. Journal of Laser and Health Academy, 2012(1); 46-58.

Patients' assessment of sexual gratification improvement after IntimaLase® treatment.

Treatment for genitourinary syndrome of menopause / vaginal atrophy

- Non-ablative gentle photothermal treatment of the vaginal canal causing mild hyperthermia and inducing microvascularisation and tissue regeneration
- Restores normal vaginal mucosa structure and function
- Eliminates the need for long-term estrogen treatment

Atrophied vaginal mucosa

Vaginal mucosa after RenovaLase® treatment

Courtesy of Dr. Gaspar

RenovaLase® treatment induces a significant improvement of genitourinary syndrome of menopause, including vaginal dryness and dyspareunia. Additionally, this treatment can be proposed in postmenopausal women who cannot be treated with hormones.

Dr Marco Gambacciani

Gambacciani M, Levancini M, Cervigni M. Vaginal erbium laser: the second-generation thermotherapy for the genitourinary syndrome of menopause. Climacteric. 2015, 18(5):757-763.

RenovaLase® significantly improves GSM symptoms, including vaginal dryness and dyspareunia, in breast cancer survivors.

Gambacciani, Marco, and Marco Levancini. "Vaginal erbium laser as second-generation thermotherapy for the genitourinary syndrome of menopause: a pilot study in breast cancer survivors." Menopause 24.3 (2017): 316-319.

Pelvic organ prolapse treatment

- Photothermal tightening of the tissue and contraction of the vaginal canal stimulating collagen remodeling and the synthesis of new collagen fibers
- A safe and non-invasive alternative to traditional methods
- Incisionless and virtually painless, with no cutting, bleeding or sutures

The effect of ProlapLase® on cystocele grade distribution at baseline and follow-ups. The figure shows the effects of 2-7 laser treatments on 67 patients over a period of 3 years.

Erbium:YAG laser treatment of pelvic organ prolapses: 3 years follow-up. Sencar S., Bizjak-Ogrinc U., Vizintin", April 2018

Significant reduction of average pelvic organ prolapse (POP) grade was already observed after the first treatment session. POP grade reduction continued to improve with additional treatments.

Data presented at IMS: 15th World Congress on Menopause, September 2016

Download a compendium of scientific studies proving the safety and efficacy of noninvasive gynecology treatments using Fotona SMOOTH® technology.

Training & Education

Regular clinical workshops – make a SMOOTH start!

Comprehensive workshops and online trainings

Training is provided in cooperation with the Laser and Health Academy under the guidance of experts in medical laser technology.

The extensive live and online workshops, where participants engage in live demonstrations and gain in-depth understanding of laser physics and laser tissue interaction, provide the needed insight into the fundamentals of non-invasive gynecological treatments and other procedures.

THE WORKSHOPS COVER:

- Laser safety and physics
- Laser-tissue interaction
- Extensive theoretical and hands-on application training
- A visit to a clinic for live patient demonstrations

ANNUAL INTERNATIONAL LASER & HEALTH ACADEMY SYMPOSIUM

- Attended by several hundred physicians every year
- Newest research and treatments in different fields of laser medicine, including gynecology
- For more information, contact info@laserandhealth.com

Fotona and the Laser & Health Academy

Fotona has partnered with the Laser & Health Academy (LA&HA) to help support the professional growth of medical practitioners. To get the most out of your Fotona laser system, our practitioner workshops, co-organized with LA&HA (www.laserandhealth.com), provide hands-on demonstrations of our lasers by international clinical experts.

Committed to Engineering
The Highest Performance, Best Made Laser Systems in the World

since 1964

WHY DOCTORS CHOOSE FOTONA

“Fotona procedures are very safe. The SMOOTH (technology) is intrinsically safe. After the use of Fotona lasers, seeing a few patients, I did realize, right away, that these procedures are very safe, very effective and rewarding also from an economical point of view.”

— Dr. Marco Gambacciani, Italy

“So has the laser changed my practice? Absolutely! To be a good well-rounded clinician you need to be good or have a knowledge, certainly, of all aspects of treatment and investigations and the way we look after our patients. So, for me, you need to be able to offer everything to be a good urogynecologist. And a laser for me is another option outside of surgery.”

— Dr. Barry O'Reilly, Ireland

“The Fotona laser is definitely my choice because it's established worldwide. And from my experience I'm a happy user. I'm very excited to have my second unit installed very soon.”

— Dr. Koh Kai Yee, Malaysia

“I began to work with a very effective method which gives me the opportunity to help my patients without operations have a very good result.”

— Dr. Svetlana Stulova, Russia

“The decision to purchase the Fotona came after I've checked all existing systems provided. Fotona was the only one, definitely the most user-friendly and, especially, the support. The support was very, very important for me because I need the support. I need to know that somebody's behind me. It's the best thing I've ever, ever purchased. Ever!”

— Dr. Liora Bunzl, Austria

“There are all sorts of lasers now out there. But my rationale was that the Fotona lasers are extremely safe and safety is what we should strive for.”

— Dr. Aleksandra Novakov Mikić, Serbia
